

TAKE BACK CONTROL

With Advanced Leak Detection and Predictive Analytics for Commercial Refrigeration

OVER \$2 MILLION SAVED

So Far...

On Refrigerant costs alone for Hussmann Service Customers using StoreConnect on their refrigeration equipment.

Due to the scope of refrigerant leaks and their environmental impact, the EPA has proposed that Automatic Leak Detection systems (like StoreConnect) be required on all equipment with a charge size of more than 1500 lbs.

Aside from the pending regulation, the truth is that **limiting leaks is a driver of cost-savings**. StoreConnect is active in more than 500 sites nationwide and the statistics below come directly from the 140 sites that Hussmann's service team directly manages.

But That's Not All...

Leaks Are Just One Source of Cost Savings...

You can expect the price of refrigerant to continue to increase in the coming years as the regulations phase out the use of HFCs.

So, what can you do to cut costs and keep your equipment running longer?

1. Limit your refrigerant use by **catching leaks quicker and confirming the right leak is fixed.**
2. Extend the life of your refrigeration equipment with a **full refrigeration management solution.** StoreConnect helps retailers better manage their equipment to reduce emergency truck rolls and case downtime.
3. And don't forget...by reducing your leak rate of HFC refrigerants **you may qualify for carbon credits.** Depending on leak rate and refrigerant charge, a typical credit for a 30% leak reduction could be worth between \$1000-2500 per store each year.

Our system provides a comprehensive approach turning your reactive refrigeration equipment fixes into proactive solutions.
